

TRIKDIS DUAL COMMUNICATOR

G16 with the additional module E485 (Ethernet) or W485 (WiFi) is the perfect solution to upgrade the alarm panels via DATA BUS to LTE and IP or WiFi using the PROTEGUS application.

The old system is reborn with new features like:

Remote Arm and Disarm

System status

Bypass and Automatic Zone Discovery* (marked in red, which supports this function)

Remote control of electrotechnical equipment (light, ventilation systems, heating, sprinklers, etc.)

Temperature monitoring (with iO8 expander)

Upgrade your alarm system with a new solution and create the most convenient option for you and your customer!

BENEFITS

DUAL channel for greater protection of your assets.

Choose whichever is most convenient for main channel - Ethernet or WiFi.

Upgrade with less investment

No need to change existing system. PROTEGUS App and Ethernet or Wifi as primary channel, minimizes the transmission and consumption of DATA.

Create automation system and control it remotely

Manage what is important: lights, heating, doors with the same PROTEGUS app

App PROTEGUS - free

* An advanced feature for compatible panels:
